

Research Fields

EXPLORE NEW HORIZONS

Offenburg University's research strength lies in its application-oriented approach, leading to expertise and innovative technological solutions. We work 'close to the product' collaborating with companies in Germany and abroad, but also with particular scholarly depth in our dissertation projects in cooperation with both national and international research universities.

While as a former technical college, Offenburg's academic research activities are relatively young, today more than 70 professors, 80 scientific staff members and 35 doctoral candidates are pursuing research at the Hochschule. Small and midsize businesses (SMB's) in particular, often lacking adequate research capacities on their own, make use of this opportunity of cooperation which benefits both sides.

**Below you will find our main research areas and current projects:
By clicking on a subject area, you can access its detail you are interested in.**

Next feel free to select field, faculty and/or project leader to narrow your options. You may consider, that you have restricted reading permission for some projects. Also only projects are shown, which were raised from 9. April 2014.
